

Sumanth MVS

Full Stack Engineer | Java Developer

Email: sumanthmvs2012@gmail.com | Cell: 6827728043 | Portfolio: [Portfolio](#) | LinkedIn: [LinkedIn](#) | Address: Texas, USA

PROFESSIONAL SUMMARY:

Full Stack Engineer with 5 years of experience building scalable backend systems and APIs using Java, Spring Boot, Kafka, React, and AWS. Currently developing enterprise integration platforms at AT&T processing millions of transactions, with proven results improving reliability by 30% and API performance by 25%.

EDUCATION:

Southern Arkansas University, USA: Master's in Computer Science | August 2021- May 2023

GITAM University, India: Bachelor's in Computer Science | June 2013 - July 2017

TECHNICAL SKILLS:

Languages: Java 8/11/17, Python, JavaScript, TypeScript, C#, SQL, HTML, CSS, JSON, XML

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Cloud, JPA/Hibernate, React, Angular, Node.js, .NET, JUnit, Mockito

APIs & Messaging: RESTful APIs, GRpc, SOAP Web Services, GraphQL, Microservices, Kafka, OAuth2, JWT, Webhooks

Cloud & DevOps: AWS (S3, EC2, IAM, Lambda, SNS, SQS, CloudWatch), Azure, GCP, Docker, Kubernetes, Jenkins, CI/CD, JFrog

Databases: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Redis, NoSQL, Database Modeling, Query Optimization

Observability & Testing: Grafana, OpenSearch, SonarQube, Lens, Redhat OpenShift, Unit Testing, Postman

Tools: Git/GitHub, Jira, Confluence, IntelliJ IDEA, Eclipse, VS Code, SonarQube, GitHub Copilot

WORK EXPERIENCE:

Full Stack Engineer at Tech Mahindra (Client: AT&T) | Dallas, TX | September 2024 – Current

AT&T Integration Adapter Platform – (Java 11/17, Spring Boot 2.7/3.1, REST/SOAP APIs, Microservices, XML/JSON, React, Azure (Lens), Jenkins, GitHub with Co-Pilot, Grafana, Open Dashboard.)

- Designed and developed 20+ Spring Boot microservices supporting integration across 2,000+ upstream APIs and 400+ downstream enterprise systems.
- Built and maintained REST/SOAP integration adapters processing millions of XML and JSON transactions annually with high availability.
- Implemented retry, timeout, and fault-tolerance mechanisms that improved service reliability by approximately 30 engineering support hours per month and reduced integration failures by 20%.
- Developed JSON-to-XML and XML-to-JSON transformation services that eliminated approximately 20–25 hours of manual defect investigation and rework per month.
- Optimized API communication using connection pooling and efficient request handling, reducing request processing delays and saving approximately 15–20 hours of operational troubleshooting each month.
- Built Kafka-based event-driven workflows enabling asynchronous processing and reduced system coupling by 40%.
- Secured enterprise APIs using OAuth2 and JWT authentication supporting secure communication across multiple platforms.
- Implemented Redis caching strategies that reduced backend database calls by 35% and improved API throughput.
- Created centralized monitoring dashboards using Grafana and OpenSearch, reducing issue investigation time by 40%.
- Collaborated with cross-functional teams to deliver integrations supporting millions of customer service transactions.
- Leveraged GitHub Copilot and AI-assisted development workflows, saving approximately 8–10 development hours per engineer each sprint by automating repetitive coding tasks.

Full Stack Engineer at TCS (Client: RS Components) | Bangalore, India | January 2019 – July 2021

E-commerce Order Management System – (Java 8/11, Spring Boot, React 16, REST APIs, PostgreSQL, Jenkins, Git, AWS, JPA/Hibernate)

- Developed 15+ full-stack features using React, Spring Boot supporting order management, catalog, and checkout workflows.
- Built scalable REST APIs handling 10,000+ daily transactions with comprehensive validation and exception handling.
- Reduced order-processing failures by 20% through improved business validation and error-handling mechanisms.
- Optimized PostgreSQL queries, indexing strategies, and database access patterns resulting in 25% faster API response times.
- Implemented AWS SNS/SQS-based asynchronous messaging, saving approximately 30 engineering hours per month by reducing manual retries and service coordination.
- Developed reusable React components improving UI development efficiency by 30%.
- Integrated OAuth2/JWT security controls protecting customer and transaction data.
- Containerized applications using Docker, automated deployments through Jenkins CI/CD pipelines, reducing deployment effort by 50%.
- Scheduled and monitored critical batch processing jobs supporting daily business operations and backend integrations.

Technical Trainee at Evolutyz IT Services | Vizag, India | December 2017 – September 2018

Healthcare Appointment & Subscription System – (Java 8/11, Spring Boot, React 16, REST APIs, PostgreSQL)

- Developed backend services and APIs for appointment scheduling and subscription systems.
- Built REST APIs serving healthcare-related transactions and reducing manual administrative effort by 30%.
- Developed React-based modules improving user interaction and booking efficiency.
- Participated in complete SDLC activities including development, testing, deployment, and production support.
- Implemented monitoring using AWS CloudWatch reducing average incident resolution time from approximately 90 minutes to under 60.
- Contributed to database design and backend logic supporting thousands of appointment records.

PROJECTS:

HR Analytics at Southern Arkansas University | Dallas, Texas | November 2023 – July 2024

Developed scalable HR analytics system processing employee data for attrition, demographics, and satisfaction insights using optimized queries and data-driven reporting.

University Management System at GITAM University | Vizag, India | June 2017 – November 2017

Designed a full-stack system managing student, faculty, courses, attendance, and grading data.
